Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6, 7, 10, and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Neubauer '614. The term "synchronous motor" in the claims is undefined. Therefore the broadest reasonable interpretation of the term is "any motor capable of running at a constant speed", which includes all electric motors. Neubauer shows an electric motor actuator with an eccentric planetary gear drive in figure 4. A position sensor 12 is shown figure 1.3. The actuator is used for positioning a wiper blade assembly (not shown) in a vehicle.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Neubauer '614. It would have been obvious to one of ordinary skill in this art to use the Neubauer actuator for any of a number of applications including transmission position selector and a park lock actuator because the device is compact and easily controlled.

Allowable Subject Matter

Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not anticipate nor render obvious the invention of an electric rotary actuator with a planetary eccentric transmission as claimed in combination with an incremental encoder that has a magnet that rotates with a rotor, a magnetic flux detecting means fixed to a housing.

Prior Art Discussed

The examiner has considered the references cited in applicant's Information Disclosure Statement filed July 16, 2003. None of the references cited show all of the features of the claimed invention.

The references cited by the examiner are deemed pertinent to applicant's disclosure.
